SHARE ICONS:

PREVIEW:

i made some simple crystals (8 different models)

they have a simple texture i made, if you want to add them to your game you can change the texture and you can add some glow effect too (if your game engine supports this)

edit: i upgraded the crystals, added a bevelled version of the crystals (useful for LOD), added some rocks around the crystals and upgraded the preview

the new added rock texture is mine too.

These are so versatile. I am using them for mining crystals for the mining skill in my game by applying copper or tin textures to them, for crystals by coloring them brightly, for teleportation crystal by making them big and transparent, and for crafting crystals by making them double sided in Blender.

I've included this asset in the AnyRPG Engine. Its been featured in a YouTube livestream at <https://youtu.be/t4xqkYE9YrU> and you've been added to both the in-engine credits, and the credits at anyrpg.org.
